

Claims: 1, 4, 7, 8, 11, 14-16, 18, 21, 24-26, 28

Cited document: 1

[0063] - [0107] etc. of cited document 1 disclose that when a mobile terminal network is moved under the control of another access node, the representative terminal performs location recording by sending the address of the terminal which is in its own mobile network and the address of the representative terminal itself to a location management server via the access node.

It can be seen that the inventions disclosed in cited document 1 and the inventions pertaining to the claims given above of the subject application are in essence the same.
